Date of issue ..... : Jun.21, 2024

**Representative Laboratory Name.: Shenzhen CTA Testing Technology Co., Ltd.**

Address ..... : Room 106, Building 1, Yibaolai Industrial Park, Qiaotou Community, Fuhai Street, Bao'an District, Shenzhen, China

**Applicant's name..... : Shenzhen Techtion Smart Electronics Co., Ltd**

Address ..... : Room 902, 8th Floor, Unit 1, Building No. 2, Xintianxia Chengyun Factory District, Vanke City Community, Bantian Street, Longgang District, Shenzhen, China

**Test specification .....**

Standard..... : **FCC Part 15.407: General technical requirements**

TRF Originator..... : Shenzhen Global Test Service Co.,Ltd.

Master TRF ..... : Dated 2014-12

**Test item description .....** **Outdoor Reflective Display Terminal**

Trade Mark ..... : N/A

Manufacturer ..... : Shenzhen Techtion Smart Electronics Co., Ltd

Model/Type reference ..... : TS-156PHD

Listed Models ..... : Please refer to page two

Operation Frequency..... : From 5180MHz to 5240MHz/ 5745MHz to 5825MHz

Hardware Version ..... : N/A

Software Version..... : N/A

Rating ..... : DC12.0V/4.0A by Adapter

Result ..... : **PASS**

# TEST REPORT

|   |                                |

## 1. TEST STANDARDS

The tests were performed according to following standards:

[FCC Rules Part 15.407](#): General technical requirements.

[ANSI C63.10-2020](#): American National Standard for Testing Unlicensed Wireless Devices

[KDB 789033 D02 General U-NII Test Procedures New Rules v02r01](#): UNII, U-NII, U-NII Test Procedures

## 2. SUMMARY

### 2.1. General Remarks

|                                |   |               |
|--------------------------------|---|---------------|
| Date of receipt of test sample | : | May. 10, 2024 |
| Testing commenced on           | : | May. 10, 2024 |
| Testing concluded on           | : | Jun. 20, 2024 |

### 2.2. Product Description

|                          |  |
|--------------------------|--|
| Product Name:            | Outdoor Reflective Display Terminal  |
| Trade Mark:              | N/A  |
| Model/Type reference:    | TS-156PHD  |
| List Model:              | TS-780PHD,TS-780FHD,TS-101PHD,TS-101FHD,TS-105PHD,TS-105FHD,TS-133PHD,TS-133FHD,TS-156FHD,TS-215PHD,TS-215FHD,TS-238PHD,TS-238FHD,TS-280PHD, TS-280FHD,TS-286THD,TS-298THD,TS-280THD,TS-320PHD,TS-320FHD,TS-362THD,TS-401THD,TS-430PHD,TS-430THD,TS-430FHD,TS-434THD,TS-500THD,TS-500FHD,TS-500PHD,TS-550THD,TS-550FHD,TS-550PHD,TS-650THD,TS-650FHD,TS-650PHD,TS-750THD,TS-750FHD,TS-750PHD,TS-850THD,TS-850FHD,TS-850PHD,TS-860THD,TS-860FHD,TS-860PHD,TS-980THD,TS-980FHD,TS-980PHD,TS-110FHD,TS-110THD |
| Model Declaration        | PCB board, structure and internal of these model(s) are the same, Only the model name different , So no additional models were tested.   |
| Power supply:            | DC 12.0V/4.0A by Adapter   |
| Hardware Version         | N/A  |
| Software Version         | N/A  |
| Sample ID                | CTA240530001-S0001-1# & CTA240530001-S0001-2#  |
| Bluetooth                |  |
| Frequency Range          | 2402MHz ~ 2480MHz  |
| Channel Number           | 79 channels for Bluetooth (DSS)<br>40 channels for Bluetooth (DTS)   |
| Channel Spacing          | 1MHz for Bluetooth (DSS)<br>2MHz for Bluetooth (DTS)   |
| Modulation Type          | GFSK, $\pi/4$ -DQPSK, 8-DPSK for Bluetooth (DSS)<br>GFSK for Bluetooth (DTS)   |
| 2.4GWLAN                 |  |
| WLAN Operation frequency | IEEE 802.11b: 2412-2462MHz<br>IEEE 802.11g: 2412-2462MHz<br>IEEE 802.11n HT20: 2412-2462MHz<br>IEEE 802.11n HT40:2422-2452MHz  |
| WLAN Modulation Type     | IEEE 802.11b: DSSS (CCK, DQPSK, DBPSK)<br>IEEE 802.11g: OFDM (64QAM, 16QAM, QPSK, BPSK)<br>IEEE 802.11n HT20: OFDM (64QAM, 16QAM, QPSK, BPSK)<br>IEEE 802.11n HT40: OFDM (64QAM, 16QAM, QPSK, BPSK)  |
| Channel number:          | 11 Channel for IEEE 802.11b/g/n(HT20)<br>7 Channel for IEEE 802.11n (HT40)   |
| Channel separation:      | 5MHz   |
| WIFI(5.2G/5.8G Band)     |  |
| Frequency Range          | 5180-5240MHz, 5745MHz to 5825MHz   |
| Channel Number           | 4 Channels for 20MHz bandwidth(5180-5240MHz)<br>5 channels for 20MHz bandwidth(5745-5825MHz)<br>2 channels for 40MHz bandwidth(5190~5230MHz)<br>2 channels for 40MHz bandwidth(5755~5795MHz)<br>1 channels for 80MHz bandwidth(5210MHz)<br>1 channels for 80MHz bandwidth(5775MHz)   |

|                     |  |
|---------------------|--|
| Modulation Type     | IEEE 802.11a: OFDM (64QAM, 16QAM, QPSK, BPSK)<br>IEEE 802.11n HT20: OFDM (64QAM, 16QAM, QPSK, BPSK)<br>IEEE 802.11n HT40: OFDM (64QAM, 16QAM, QPSK, BPSK)<br>IEEE 802.11ac VHT20: OFDM (256QAM,64QAM, 16QAM, QPSK, BPSK)<br>IEEE 802.11ac VHT40: OFDM (256QAM,64QAM, 16QAM, QPSK, BPSK)<br>IEEE 802.11ac VHT80: OFDM (256QAM,64QAM, 16QAM, QPSK, BPSK) |
| Antenna Description | Two External antenna respectively. WLAN not support 2*2MIMO technology.<br>ANT0 used for WIFI TX/RX, 2.0 dBi(Max.) for 2.4GWLAN;<br>ANT1 used for BT&WIFI TX/RX, 2.0 dBi(Max.) for BT and 2.0dBi (Max.) for 5GWLAN;  |

## 2.3. Equipment Under Test

### Power supply system utilised

|                      |   |  |                                 |
|----------------------|---|--|---------------------------------|
| Power supply voltage | : | <input type="radio"/> 230V/ 50 Hz                      | <input type="radio"/> 120V/60Hz |
|                      |   | <input checked="" type="radio"/> 12 V DC               | <input type="radio"/> 24 V DC   |
|                      |   | <input type="radio"/> Other (specified in blank below) |                                 |

DC 12.0V

## 2.4. Short description of the Equipment under Test (EUT)

This is a Outdoor Reflective Display Terminal.  
For more details, refer to the user's manual of the EUT.

## 2.5. EUT operation mode

The application provider specific test software to control sample in continuous TX and RX.

| Antenna        | Chain0 (ANT0)                       |                                     |                                     | Chain1 (ANT1)            |                          |                          | Simultaneously           |

The EUT has been tested under operating condition.

This test was performed with EUT in X, Y, Z position and the worst case was found when EUT in X position.

AC conducted emission pre-test at both at AC 120V/60Hz and AC 240V/50Hz modes, recorded worst case(AC 120V/60Hz);

AC main conducted emission pre-test at charge from PC modes, recorded worst case;

Worst-case mode and channel used for 9 KHz-1000 MHz radiated emissions was the mode and channel with the highest output power, that was determined to be IEEE 802.11ac VHT20 mode (HCH).

## 2.6. Block Diagram of Test Setup

## 2.7. Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for **FCC ID: 2BG6CTS-156PHD** filing to comply with Section 15.407 of the FCC Part 15, Subpart E Rules.

## 2.8. EUT Exercise Software

The system was configured for testing in a continuous transmits condition and change test channels by software (setup.exe) provided by application.

## 2.9. Special Accessories

| Manufacturer                           | Description | Model     | Serial Number | Certificate |
|--|-------------|-----------|---------------|-------------|
| Hunan Dajing Power Technology Co., Ltd | Adapter     | ADP-48D12 | --            | SDOC        |

## 2.10. External I/O Cable

| I/O Port Description | Quantity | Cable              |
|----------------------|----------|--------------------|
| DC IN Port           | 1        | Non-Shielded, 1.0m |
| RS232 Port           | 1        | N/A                |
| USB Port             | 4        | N/A                |
| HDMI Port            | 1        | N/A                |
| VGA Port             | 1        | N/A                |
| LAN Port             | 1        | N/A                |
| LINE Port            | 1        | N/A                |
| MIC Port             | 1        | N/A                |

## 2.11. Modifications

No modifications were implemented to meet testing criteria.

### 3. TEST ENVIRONMENT

#### 3.1. Address of the test laboratory

##### Shenzhen CTA Testing Technology Co., Ltd.

Room 106, Building 1, Yibaolai Industrial Park, Qiaotou Community, Fuhai Street, Bao'an District, Shenzhen, China

#### 3.2. Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

##### FCC-Registration No.: 517856 Designation Number: CN1318

Shenzhen CTA Testing Technology Co., Ltd. has been listed on the US Federal Communications Commission list of test facilities recognized to perform electromagnetic emissions measurements.

##### A2LA-Lab Cert. No.: 6534.01

Shenzhen CTA Testing Technology Co., Ltd. has been listed by American Association for Laboratory Accreditation to perform electromagnetic emission measurement.

The 3m-Semi anechoic test site fulfils CISPR 16-1-4 according to ANSI C63.10 and CISPR 16-1-4:2010.

#### 3.3. Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

|                       |              |
|-----------------------|--------------|
| Temperature:          | 15-35 ° C    |
| Humidity:             | 30-60 %      |
| Atmospheric pressure: | 950-1050mbar |

#### 3.4. Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. to TR-100028-01 "Electromagnetic compatibility and Radio spectrum Matters (ERM);Uncertainties in the measurement of mobile radio equipment characteristics; Part 1" and TR-100028-02 "Electromagnetic compatibility and Radio spectrum Matters (ERM);Uncertainties in the measurement of mobile radio equipment characteristics; Part 2 " and is documented in the Shenzhen CTA Testing Technology Co., Ltd. quality system acc. to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for Shenzhen CTA Testing Technology Co., Ltd. :

| Test                                     | Range       | Measurement Uncertainty | Notes |
|--|-------------|-------------------------|-------|
| Radiated Emission                        | 9KHz~30MHz  | 3.02 dB                 | (1)   |
| Radiated Emission                        | 30~1000MHz  | 4.06 dB                 | (1)   |
| Radiated Emission                        | 1~18GHz     | 5.14 dB                 | (1)   |
| Radiated Emission                        | 18-40GHz    | 5.38 dB                 | (1)   |
| Conducted Disturbance                    | 0.15~30MHz  | 2.14 dB                 | (1)   |
| Output Peak power                        | 30MHz~18GHz | 0.55 dB                 | (1)   |
| Power spectral density                   | /           | 0.57 dB                 | (1)   |
| Spectrum bandwidth                       | /           | 1.1%                    | (1)   |
| Radiated spurious emission (30MHz-1GHz)  | 30~1000MHz  | 4.10 dB                 | (1)   |
| Radiated spurious emission (1GHz-18GHz)  | 1~18GHz     | 4.32 dB                 | (1)   |
| Radiated spurious emission (18GHz-40GHz) | 18-40GHz    | 5.54 dB                 | (1)   |

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

Remark:

1. The measurement uncertainty is not included in the test result.
2. NA = Not Applicable; NP = Not Performed
3. Note 1 – Test results inside test report;
4. Note 2 – Test results in other test report (MPE Report).
5. We tested all test mode and recorded worst case in report

Preliminary tests were performed in different data rate to find the worst radiated emission. The data rate shown in the table below is the worst-case rate with respect to the specific test item. Investigation has been done on all the possible configurations for searching the worst cases. The following table is a list of the test modes shown in this test report.

| Test Items   | Mode                                    | Data Rate |
|--|---|-----------|
| Maximum Peak Conducted Output Power  | 802.11a                                 | 6 Mbps    |

Note: The Cal.Interval was one year.

## 4. TEST CONDITIONS AND RESULTS

### 4.1. AC Power Conducted Emission

#### TEST CONFIGURATION

#### TEST PROCEDURE

- 1 The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. The EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10-2020.
- 2 Support equipment, if needed, was placed as per ANSI C63.10-2020
- 3 All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10-2020
- 4 The EUT received DC 12.0V power, the adapter received AC120V/60Hz or AC 240V/50Hz power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.
- 5 All support equipments received AC power from a second LISN, if any.
- 6 The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
- 7 Analyzer / Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.
- 8 During the above scans, the emissions were maximized by cable manipulation.

#### AC Power Conducted Emission Limit

For intentional device, according to § 15.207(a) AC Power Conducted Emission Limits is as following :

| Frequency range (MHz) | Limit (dBuV) |           |
|-----------------------|--------------|-----------|
|                       | Quasi-peak   | Average   |
| 0.15-0.5              | 66 to 56*    | 56 to 46* |
| 0.5-5                 | 56           | 46        |
| 5-30                  | 60           | 50        |

\* Decreases with the logarithm of the frequency.

#### DISTURBANCE Calculation

The AC mains conducted disturbance is calculated by adding the 10dB Pulse Limiter and Cable Factor and Duty Cycle Correction Factor (if any) from the measured reading. The basic equation with a sample calculation is as follows:

$$CD \text{ (dBuV)} = RA \text{ (dBuV)} + PL \text{ (dB)} + CL \text{ (dB)}$$

|                                  |  |
|----------------------------------|--|
| Where CD = Conducted Disturbance | CL = Cable Attenuation Factor (Cable Loss) |
| RA = Reading Amplitude           | PL = 10 dB Pulse Limiter Factor            |

**TEST RESULTS**

Remark: We measured Conducted Emission at all mode in AC 120V/60Hz, the worst case was recorded .

|               |             |                |                     |

## 4.2. Radiated Emission

### TEST CONFIGURATION

Frequency range 9 KHz – 30MHz

Frequency range 30MHz – 1000MHz

Frequency range above 1GHz

**TEST PROCEDURE**

1. The EUT was placed on a turn table which is 0.8m above ground plane when testing frequency range 9 KHz –1GHz;the EUT was placed on a turn table which is 1.5m above ground plane when testing above 1GHz.
2. Maximum procedure was performed by raising the receiving antenna from 1m to 4m and rotating the turn table from 0° to 360° to acquire the highest emissions from EUT.
3. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
4. Repeat above procedures until all frequency measurements have been completed.
5. The EUT minimum operation frequency was 24MHz and maximum operation frequency was 5825MHz.so radiated emission test frequency band from 9KHz to 40GHz.
6. The distance between test antenna and EUT as following table states:

| Test Frequency range | Test Antenna Type          | Test Distance |
|----------------------|----------------------------|---------------|
| 9KHz-30MHz           | Active Loop Antenna        | 3             |
| 30MHz-1GHz           | Ultra-Broadband Antenna    | 3             |
| 1GHz-18GHz           | Double Ridged Horn Antenna | 3             |
| 18GHz-25GHz          | Horn Antenna               | 1             |

7. Setting test receiver/spectrum as following table states:

| Test Frequency range | Test Receiver/Spectrum Setting  | Detector |
|----------------------|---|----------|
| 9KHz-150KHz          | RBW=200Hz/VBW=3KHz, Sweep time=Auto   | QP       |
| 150KHz-30MHz         | RBW=9KHz/VBW=100KHz, Sweep time=Auto  | QP       |
| 30MHz-1GHz           | RBW=120KHz/VBW=1000KHz, Sweep time=Auto   | QP       |
| 1GHz-40GHz           | Peak Value: RBW=1MHz/VBW=3MHz,<br>Sweep time=Auto<br>Average Value: RBW=1MHz/VBW=10Hz,<br>Sweep time=Auto | Peak     |

**Field Strength Calculation**

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor(if any) from the measured reading. The basic equation with a sample calculation is as follows:

**FS = RA + AF + CL - AG**

|                           |  |
|---------------------------|--|
| Where FS = Field Strength | CL = Cable Attenuation Factor (Cable Loss) |
| RA = Reading Amplitude    | AG = Amplifier Gain                        |
| AF = Antenna Factor       |  |

Transd=AF +CL-AG

**RADIATION LIMIT**

According to §15.407 (b): Except as shown in paragraph (b)(7) of this section, the maximum emissions outside of the frequency bands of operation shall be attenuated in accordance with the following limits

| Frequency (MHz) | EIRP Limit (dBm)                   | Equivalent Field Strength at 3m (dBμV/m) |
|-----------------|------------------------------------|--|
| 5150-5250       | -27                                | 68.2                                     |
| 5250-5350       | -27                                | 68.2                                     |
| 5470-5725       | -27                                | 68.2                                     |
| 5725-5850       | -27 (beyond 10MHz of the bandedge) | 68.2                                     |
|                 | -17 (within 10 MHz of band edge)   | 78.2                                     |

| Frequency (MHz) | Distance (Meters) | Radiated (dBμV/m)                          | Radiated (μV/m) |
|-----------------|-------------------|--|-----------------|
| 0.009-0.49      | 3                 | $20\log(2400/F(\text{KHz}))+40\log(300/3)$ | 2400/F(KHz)     |
| 0.49-1.705      | 3                 | $20\log(24000/F(\text{KHz}))+40\log(30/3)$ | 24000/F(KHz)    |
| 1.705-30        | 3                 | $20\log(30)+40\log(30/3)$                  | 30              |
| 30-88           | 3                 | 40.0                                       | 100             |
| 88-216          | 3                 | 43.5                                       | 150             |
| 216-960         | 3                 | 46.0                                       | 200             |
| Above 960       | 3                 | 54.0                                       | 500             |

**TEST RESULTS**

Remark: We measured Radiated Emission at all mode from 9KHz to 25GHz in AC 120V/60Hz and the worst case was recorded.

|               |             |                |                     |

| Temperature   | 23.4°C      | Humidity       | 54.5%               |
| Test Engineer | Lushan Kong | Configurations | IEEE 802.11ac20 HCH |

**For 9 KHz~30MHz**

| Freq. (MHz) | Level (dBuV) | Over Limit (dB) | Over Limit (dBuV) | Remark   |
|-------------|--------------|-----------------|-------------------|----------|
| -           | -            | -               | -                 | See Note |

Note:

The amplitude of spurious emissions which are attenuated by more than 20 dB below the permissible value has no need to be reported.

Distance extrapolation factor =  $40 \log(\text{specific distance} / \text{test distance})$  (dB);

Limit line = specific limits (dBuV) + distance extrapolation factor.

For 30MHz-1GHz

For 1GHz to 40GHz

| 1           | 11650      | 41.30                   | 38.55                 | 33.13         | 11.26           | 57.98                       | 68.20                     | -10.22      | Peak     | Vertical     |
| 1           | 11650      | 28.57                   | 38.55                 | 33.13         | 11.26           | 45.25                       | 54.00                     | -8.75       | AV       | Vertical     |

**REMARKS:**

1. Result Level = Read Level + Antenna Factor + Cable loss - PRM Factor.
2. Margin = Result Level - Limit
3. The other emission levels were very low against the limit.
4. Detector AV is setting spectrum/receiver. RBW=1MHz/VBW=10Hz/Sweep time=Auto/Detector=Peak;

### 4.3. Duty Cycle

#### TEST CONFIGURATION

#### TEST PROCEDURE

According to KDB789033 D02 General U-NII Test Procedures New Rules v02r01 Duty Cycle (x), Transmission Duration (T):

- a. A diode detector and an oscilloscope that together have sufficiently short response time to permit accurate measurements of the on and off times of the transmitted signal
- b. The zero-span mode on a spectrum analyzer or EMI receiver, if the response time and spacing between bins on the sweep are sufficient to permit accurate measurements of the on and off times of the transmitted signal. Set the center frequency of the instrument to the center frequency of the transmission. Set  $RBW \geq EBW$  if possible; otherwise, set RBW to the largest available value. Set  $VBW \geq RBW$ . Set detector = peak or average. The zerospan measurement method shall not be used unless both RBW and VBW are  $> 50/T$ , where T is defined in section II.B.1.a), and the number of sweep points across duration T exceeds 100. (For example, if VBW and/or RBW are limited to 3 MHz, then the zero-span method of measuring duty cycle shall not be used if  $T \leq 16.7$  microseconds.)

#### TEST RESULTS

For reporting purpose only.

Please refer to Appendix D.3.

Please refer to Appendix E.3.

#### 4.4. Maximum Average Output Power

##### TEST CONFIGURATION

##### TEST PROCEDURE

According to KDB789033 D02 General U-NII Test Procedures New Rules v02r01 Measurement using a Power Meter (PM):

- a. Measurements may be performed using a wideband RF power meter with a thermocouple detector or equivalent if all of the conditions listed below are satisfied
  - 1. The EUT is configured to transmit continuously or to transmit with a constant duty cycle
  - 2. At all times when the EUT is transmitting, it must be transmitting at its maximum power control level.
  - 3. The integration period of the power meter exceeds the repetition period of the transmitted signal by at least a factor of five.
- b. If the transmitter does not transmit continuously, measure the duty cycle, x, of the transmitter output signal as described in section II.B
- c. Measure the average power of the transmitter. This measurement is an average over both the on and off periods of the transmitter.

Adjust the measurement in dBm by adding  $10 \log(1/x)$  where x is the duty cycle (e.g.,  $10 \log(1/0.25)$  if the duty cycle is 25 percent).

##### LIMIT

According to §15.407(a): The maximum output power should be not exceed follow:

| Frequency Range (MHz) | Limit   |
|-----------------------|---|
| 5150-5250             | Fixed: 1 Watt (30dBm)<br>Mobile and portable: 250mW (24dBm) |
| 5250-5350             | 250mW (24dBm)   |
| 5470-5725             | 250mW (24dBm)   |
| 5725-5850             | 1 Watt (30dBm)  |

Note: The maximum e.i.r.p at any elevation angle above 30 degrees as measured from the horizon must not exceed 125mW(21dBm)

##### TEST RESULTS

For reporting purpose only.

Please refer to Appendix D.4.

Please refer to Appendix E.4.

### 4.5. Power Spectral Density

#### TEST CONFIGURATION

#### TEST PROCEDURE

According to KDB789033 D02 General U-NII Test Procedures New Rules v02r01: The rules requires “maximum power spectral density” measurements where the intent is to measure the maximum value of the time average of the power spectral density measured during a period of continuous transmission

- a. Create an average power spectrum for the EUT operating mode being tested by following the instructions in section II.E.2. for measuring maximum conducted output power using a spectrum analyzer or EMI receiver: select the appropriate test method (SA-1, SA-2, SA-3, or alternatives to each) and apply it up to, but not including, the step labeled, “Compute power...”. (This procedure is required even if the maximum conducted output power measurement was performed using a power meter, method PM.)
- b. Use the peak search function on the instrument to find the peak of the spectrum and record its value.
- c. Make the following adjustments to the peak value of the spectrum, if applicable:
  1. If Method SA-2 or SA-2 Alternative was used, add  $10 \log(1/x)$ , where x is the duty cycle, to the peak of the spectrum.
  2. ) If Method SA-3 Alternative was used and the linear mode was used in step II.E.2.g)(viii), add 1 dB to the final result to compensate for the difference between linear averaging and power averaging.
- d. The result is the Maximum PSD over 1 MHz reference bandwidth.
- e. For devices operating in the bands 5.15-5.25 GHz, 5.25-5.35 GHz, and 5.47-5.725 GHz, the above procedures make use of 1 MHz RBW to satisfy directly the 1 MHz reference bandwidth specified in § 15.407(a)(5). For devices operating in the band 5.725-5.85 GHz, the rules specify a measurement bandwidth of 500 kHz. Many spectrum analyzers do not have 500 kHz RBW, thus a narrower RBW may need to be used. The rules permit the use of a RBWs less than 1 MHz, or 500 kHz, “provided that the measured power is integrated over the full reference bandwidth” to show the total power over the specified measurement bandwidth (i.e., 1 MHz, or 500 kHz). If measurements are performed using a reduced resolution bandwidth (< 1 MHz, or < 500 kHz) and integrated over 1 MHz, or 500 KHz bandwidth, the following adjustments to the procedures apply:
  1. Set  $RBW \geq 1/T$ , where T is defined in section II.B.I.a).
  2. Set  $VBW \geq 3 RBW$ .
  3. If measurement bandwidth of Maximum PSD is specified in 500 kHz, add  $10\log(500\text{kHz}/RBW)$  to the measured result, whereas RBW (< 500 KHz) is the reduced resolution bandwidth of the spectrum analyzer set during measurement.
  4. If measurement bandwidth of Maximum PSD is specified in 1 MHz, add  $10\log(1\text{MHz}/RBW)$  to the measured result, whereas RBW (< 1 MHz) is the reduced resolution bandwidth of spectrum analyzer set during measurement.
  5. Care must be taken to ensure that the measurements are performed during a period of continuous transmission or are corrected upward for duty cycle.

Note: As a practical matter, it is recommended to use reduced RBW of 100 KHz for the sections 5.c) and 5.d) above, since RBW=100 KHz is available on nearly all spectrum analyzers.
- f. Adjust the measurement in dBm by adding  $10 \log(1/x)$  where x is the duty cycle (e.g.,  $10 \log(1/0.25)$  if the duty cycle is 25 percent).

#### LIMIT

According to §15.407(a): The maximum output power should be not exceed follow:

| Frequency Range (MHz) | Limit   |
|-----------------------|---|
| 5150-5250             | Other then Mobile and portable:17dBm/MHz<br>Mobile and portable:11dBm/MHz |
| 5250-5350             | 11dBm/MHz   |
| 5470-5725             | 11dBm/MHz   |
| 5725-5850             | 30dBm/500kHz  |

#### TEST RESULTS

For reporting purpose only.

Please refer to Appendix D.5.

Please refer to Appendix E.5.

## 4.6. 99% and 6dB Bandwidth

### TEST CONFIGURATION

### TEST PROCEDURE

According to KDB789033 D02 General U-NII Test Procedures New Rules v02r01 for one of the following procedures may be used for section 15.407(e) specifies the minimum 6 dB emission bandwidth of at least 500 KHz for the band 5.715-5.85 GHz. The following procedure shall be used for measuring this bandwidth:

- a. Set RBW = 100 kHz.
- b. Set the video bandwidth (VBW)  $\geq 3 \times$  RBW
- c. Detector = Peak.
- d. Trace mode = max hold.
- e. Sweep = auto couple.
- f. Allow the trace to stabilize
- g. Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

Note: The automatic bandwidth measurement capability of a spectrum analyzer or EMI receiver may be employed if it implements the functionality described above.

### LIMIT

For Section 15.407(e) specifies the minimum 6 dB emission bandwidth of at least 500 KHz for the band 5.715-5.85 GHz

### TEST RESULTS

For reporting purpose only.

Please refer to Appendix E.1.

Please refer to Appendix E.2.

## 4.7. 99% and 26dBc Bandwidth

### TEST CONFIGURATION

### TEST PROCEDURE

According to KDB789033 D02 General U-NII Test Procedures New Rules v02r01 for one of the following procedures may be used for Emission Bandwidth (EBW) measurement:

- a. Set RBW = 220 kHz/430 kHz /820 kHz (approximately 1% of the emission bandwidth).
- b. Set the video bandwidth (VBW) = 3\* RBW)
- c. Detector = Peak.
- d. Trace mode = max hold.
- e. Sweep = auto couple.
- f. Allow the trace to stabilize
- g. Measure the maximum width of the emission that is 26 dB down from the maximum of the emission. Compare this with the RBW setting of the analyzer. Readjust RBW and repeat measurement as needed until the RBW/EBW ratio is approximately 1%.

Note: The automatic bandwidth measurement capability of a spectrum analyzer or EMI receiver may be employed if it implements the functionality described above.

### LIMIT

No Limits for 26dBc Bandwidth

### TEST RESULTS

For reporting purpose only.

Please refer to Appendix D.1.

Please refer to Appendix D.2.

### 4.8. Conducted Spurious Emissions and Band Edge Compliance

#### TEST CONFIGURATION

#### LIMIT

20dBc in any 100 kHz bandwidth outside the operating frequency band. In case the emission fall within the restricted band specified on 15.205(a), then the 15.209(a) limit in the table below has to be followed.

| Frequency (MHz) | Distance (Meters) | Radiated (dBµV/m)                   | Radiated (µV/m) |
|-----------------|-------------------|-------------------------------------|-----------------|
| 0.009-0.49      | 3                 | $20\log(2400/F(KHz))+40\log(300/3)$ | $2400/F(KHz)$   |
| 0.49-1.705      | 3                 | $20\log(24000/F(KHz))+40\log(30/3)$ | $24000/F(KHz)$  |
| 1.705-30        | 3                 | $20\log(30)+40\log(30/3)$           | 30              |
| 30-88           | 3                 | 40.0                                | 100             |
| 88-216          | 3                 | 43.5                                | 150             |
| 216-960         | 3                 | 46.0                                | 200             |
| Above 960       | 3                 | 54.0                                | 500             |

According to §15.407 (b): Except as shown in paragraph (b)(7) of this section, the maximum emissions outside of the frequency bands of operation shall be attenuated in accordance with the following limits

| Frequency (MHz) | EIRP Limit (dBm)                   | Equivalent Field Strength at 3m (dBµV/m) |
|-----------------|------------------------------------|--|
| 5150-5250       | -27                                | 68.2                                     |
| 5250-5350       | -27                                | 68.2                                     |
| 5470-5725       | -27                                | 68.2                                     |
| 5725-5850       | -27 (beyond 10MHz of the bandedge) | 68.2                                     |
|                 | -17 (within 10 MHz of band edge)   | 78.2                                     |

#### TEST PROCEDURE

- The EUT was placed on a turn table which is 1.5m above 1GHz.
- Maximum procedure was performed by raising the receiving antenna from 1m to 4m and rotating the turn table from 0° to 360° to acquire the highest emissions from EUT.
- And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- Repeat above procedures until all frequency measurements have been completed..
- The distance between test antenna and EUT as following table states:

| Test Frequency range | Test Antenna Type          | Test Distance |
|----------------------|----------------------------|---------------|
| 1GHz-18GHz           | Double Ridged Horn Antenna | 3             |

- Setting test receiver/spectrum as following table states:

| Test Frequency range | Test Receiver/Spectrum Setting  | Detector |
|----------------------|---|----------|
| 1GHz-18GHz           | Peak Value: RBW=1MHz/VBW=3MHz,<br>Sweep time=Auto<br>Average Value: RBW=1MHz/VBW=10Hz,<br>Sweep time=Auto | Peak     |

**Field Strength Calculation**

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor(if any) from the measured reading. The basic equation with a sample calculation is as follows:

$$FS = RA + AF + CL - AG$$

|                           |  |
|---------------------------|--|
| Where FS = Field Strength | CL = Cable Attenuation Factor (Cable Loss) |
| RA = Reading Amplitude    | AG = Amplifier Gain                        |
| AF = Antenna Factor       |  |

**TEST RESULTS**

**For Conducted at Restricted Band Measurement**

For reporting purpose only.

Please refer to Appendix D.8.

Please refer to Appendix E.8.

**For Conducted Band edge Measurement**

For reporting purpose only.

Please refer to Appendix D.6.

Please refer to Appendix E.6.

**For Conducted Spurious Emissions Measurement**

For reporting purpose only.

Please refer to Appendix D.7.

Please refer to Appendix E.7.

## 4.9. Frequency Stability

### Standard Applicable

According to FCC §15.407(g) “Manufacturers of U-NII devices are responsible for ensuring frequency stability such that an emission is maintained within the band of operation under all conditions of normal operation as specified in the user manual.”

According to FCC §2.1055(a) “The frequency stability shall be measured with variation of ambient temperature as follows:”

(1) From -30° to + 50° centigrade for all equipment except that specified in paragraphs (a) (2) and (3) of this section.

(2) From -20° to + 50° centigrade for equipment to be licensed for use in the Maritime Services under part 80 of this chapter, except for Class A, B, and S Emergency Position Indicating Radiobeacons (EPIRBS), and equipment to be licensed for use above 952 MHz at operational fixed stations in all services, stations in the Local Television Transmission Service and Point-to-Point Microwave Radio Service under part 21 of this chapter, equipment licensed for use aboard aircraft in the Aviation Services under part 87 of this chapter, and equipment authorized for use in the Family Radio Service under part 95 of this chapter.

(3) From 0° to + 50° centigrade for equipment to be licensed for use in the Radio Broadcast Services under part 73 of this chapter.

### Test Configuration

### Test Procedure

The equipment under test was connected to an external AC or DC power supply and input rated voltage. RF output was connected to a frequency counter or spectrum analyzer via feed through attenuators. The EUT was placed inside the temperature chamber. Set the spectrum analyzer RBW low enough to obtain the desired frequency resolution and measure EUT 20 degree operating frequency as reference frequency. Turn EUT off and set the chamber temperature to -30 degree. After the temperature stabilized for approximately 30 minutes recorded the frequency. Repeat step measure with 10 degree increased per stage until the highest temperature of +50 degree reached.

**Test Results**

PASS

Remark:

1. Measured all conditions and recorded worst case.

## 4.10. Antenna Requirement

### Standard Applicable

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

And according to FCC 47 CFR Section 15.407 (a), if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

### **Antenna Information**

The antenna is External Aantenna, through the buckle stretched out, The directional gains of antenna used for transmitting is 2.0dBi.
